

3M™ Incise Drapes

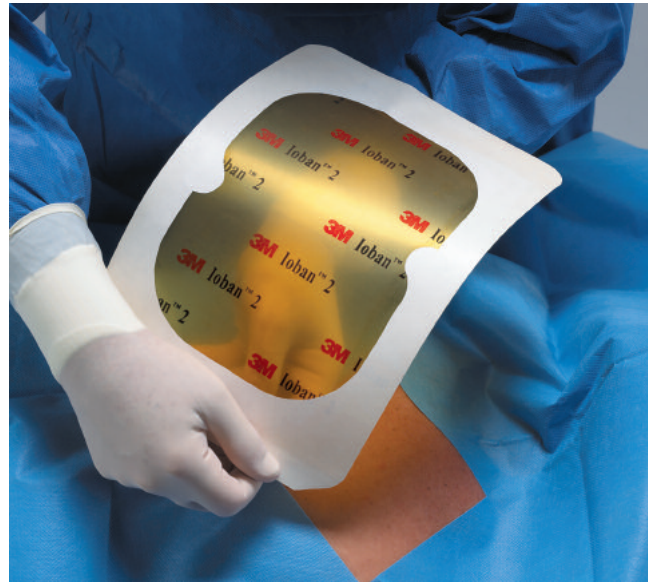

3M™ Ioban™ 2 Antimicrobial Incise Drape – 6661EZ

The drape that fits. Accept nothing less.

3M Ioban 2 Antimicrobial Incise drapes have been preferred by surgeons for over 25 years to help manage the risk of surgical site infections.

Now we've taken the unique "picture frame" delivery system from our popular 3M™ Tegaderm™ Transparent Dressings and incorporated it into the new 3M™ Ioban™ 2 Antimicrobial Incise Drape – 6661EZ, for minimally invasive surgical procedures using implantable devices and/or materials.

The 6661EZ Ioban 2 Drape is identical in clinical performance and efficacy to our other Ioban 2 Antimicrobial Incise drapes, and offers the additional advantage of quick, easy and precise drape placement every time. Its size and design also allow for time-saving and convenient one-person drape application.

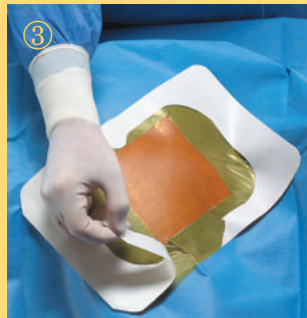

- Unique framed delivery system enables simplified, one-person application (see below)
- Size (10.5" x 8") is ideally suited for high-volume minimally invasive implant procedures
- Iodophor-impregnated adhesive provides continuous, broad-spectrum antimicrobial activity, and superior adhesion to the skin and wound edge
- Strong, conformable and breathable polyester incise film provides a sterile surface, and helps to decrease bacterial contamination from skin to gloves, gowns, instruments and implants

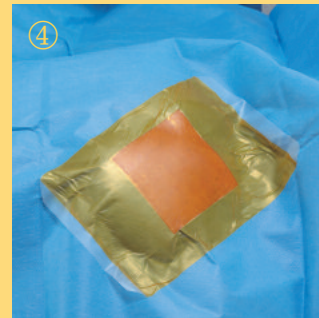

① Grasp tabs and align drape over incision site.

② Adhere drape to the sterile field as release liner is peeled away.

③ Remove frame.

④ Begin procedure.
