

GLYCOFLEX®

STAGE 2 Moderate Strength

Perna, Glucosamine, MSM and DMG for intermediate joint support

Glyco FLEX® 2 represents Stage 2 of our comprehensive stage of life program for dogs needing moderate joint support. It's also recommended for adult and maturing dogs, sporting and working breeds and supports normal recovery after surgery.

GlycOmega™ is *Perna canaliculus* from an exclusive New Zealand source. Unlike Perna extract-based products and mussel powders that may lack important fatty acids and other bioactive components (e.g. defatted powders or extracts), the entire organism is used in **Glyco FLEX®**. Only **Glyco FLEX®** products are formulated with GlycOmega™ Perna.

DMG is an amino acid that is naturally produced in the body. DMG is a naturally occurring amino acid derivative and a methyl donor that supports the body's metabolic processes. As an immune system modulator, DMG supports circulation, oxygen utilization, brain health, liver health, cellular structure, cardiovascular health, as well as joint comfort and hydration.

MSM is a source of organic sulfur. It supports the structure of joints and connective tissue. Increased availability of MSM is linked to comfort and mobility, as well as the support of collagen production.

Manganese is an essential mineral for the formation of collagen, GAGs, and proteoglycans, all of which support required cartilage integrity. A lack of manganese can lead to inefficient production of GAGs within the joints.

Glyco FLEX® bite-sized chews come in a chicken liver flavor that is highly palatable for easier delivery.

PRODUCT DETAILS:

Glyco FLEX® 2 Canine represents Stage 2 of our comprehensive stage of life program for dogs needing moderate joint support. These delicious chicken liver flavored chews are also recommended for adult and maturing dogs, sporting and working breeds as well as support normal recovery after orthopedic surgery.
