

Kitty Kollar "E" Tube Collar

The placement of esophagostomy "E" feeding tubes is a growing modality in small animal medicine. Many "E" tubes have been successfully in place for years on some patients. The challenge of the "E" tube is its care or maintenance.

The Kitty Kollar was designed as a sensible solution to the everyday patient management of the "E" tube. The adjustable collar fits securely around the animal's neck. It has a small hole for the "E" tube to pass through. A velcro strap secures or holds the "E" tube flat when not in use. Circular cotton pads with a center hole are provided to be placed between the collar and the skin. They protect the wound and absorb drainage eliminating the need for owners to learn bandage techniques or repeated clinic visits for rebandaging.

"Just want to let you know that we tried the collar for the first time and are greatly impressed. It works beautifully. Thanks for your contribution to making our life and the lives of our patients and clients easier." Katherine Brown, DVM Hillside Veterinary Hospital, Cottonwood Heights, Utah

JorVet J390 "E" Tube

- Machine washable collars provides cleansing of stomasite.
- Easy application and removal
- Protected against accidental removal
- Decreases the risk of wound trauma such as scratching
- Can leave in place for radiographs, chemo, MRI, and other procedures
- Works for most brands of "E" tubes

"These are awesome...patients are tending to keep their tubes in with these...I think that they are going to be a good seller here. I love them and am a little sad that I didn't think of them..." Liz, Veterinary Technician, Department of Feline Medicine, Texas A&M University Teaching Veterinary Hospital, College Station Texas.

J1085 Petite small feline

J1085a Feline

Includes six protector pads and laminated instruction card
